This Action is responsive to the communication filed March 6, 2007.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 8 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Boehland, of record.

Boehland shows a solenoid actuated valve as claimed with structure which makes an abrupt change in shape including surface 35 and the longitudinally extending surfaces immediately upstream and down stream thereof, and a guide surface at the lead line of "16", which surface is read as avoiding cavitation in view of the flow diagram of Figure 3. The cited structure shown in Boehland can reasonably be described as a step.

In claim 22, paragraph 6, "the upstream surface" is interpreted to mean - - an upstream surface - - and in paragraph 7 "said step portion" is understood to mean - - said step - -.

Applicant's have been fully considered but they are not persuasive. The new claim limitation "plate-shaped" is given no particular meaning in the specification. Figure 6 shows a truncated conical surface, which is what Boehland shows. Boehland therefore fairly responds to the claim limitation.
